The amino acid sequence of a recombinant bactericidal/permeability increasing (BPI) protein. BPI protein can be isolated from the granules of mammalian polyworphonuclear neutrophils (PMN). The protein has antibacterial activity associated with 3 functional domains: I (AAR81085), II (AAR81086) and III (AAR81087) present in N-terminal region of the BPI holoprotein (AAR81245). The antibacterial regions were used to design the antifungal peptides AAR81081, AAR81088-R81244 and AAR81248-R81308. The peptides are used to treat fungal infections together with other antifungal cpds e.g. fluconazole or amphotericin B. The antifungal activity of the peptides may also be enhanced by addition of a nipopolysaccharide binding protein (LBP) e.g. AAR81246. The peptides can be used to treat fungal infection, esp. Candida albicans. They are also useful for killing or inhibiting fungi in vitro e.g. for sterilising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

Recombinant BPI 50 kDa holoprotein rBPI50 (given in AAR67998) is the preferred BPI. (Updated on 25-MAR-2003 to correct PN

BPI (bactericidal permeability-increasing) peptides (AAR80996-81081 and AAR8255-372) each have an amino acid sequence that is deriv. of a BPI functional domain (or a variant) having at least one of the biological activities of BPI, such as heparin binding or neutralisation, lipopolysaccharide (LPS) binding or neutralisation or bactericidal activity. The BPI peptides are based on the amino-terminal portion of BPI, esp. functional domains I, II, and III (BPI residues 17-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MRENWARGPCNAPRWYSLMYLVAIGTAVTAAVNPGVVVRISQKGLDYASQQGTAALQKEL 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                    adverse effects associated with depressed reticuloendothelial system function, especially diminished function of Kupfer cells of the liver resulting from physical, chemical or biological insult. Physical insult is exemplified by partial or total hepatectomy such as accompanies transplantation, and trauma. Chemical insult is exemplified by the results of exposure to hepatectoxic substrances such as chloroform, glucosamine, carbon tetrachloride and ethanol. Biological insult is exemplified by (non-)infectious diseases such as viral hepatitis and enfancing inflammantory hepatitis. The BPI protein product is preferably rBPI-21, rBPI, rBPI, rBPI-42 dimer or one of 222 specified BPI peptides. The present sequence is that of rBPI
                                                                                                                                                                                  patent relates to the new use of a BPI protein product for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         KRIKIPDYSDSFKIKHLGKGHYSFYSMDIREFQLPSSQISMVPUVGLKFSISNANIKISG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 487 AA;
```

```
This is the amino acid sequence of a bactericidal/permeability increasing (BPI) protein. BPI is a protein isolated from the granules of mammalian polyworphomuclear leukocytes. It is a 55 kD cationic protein which has potent antibacterial activity against a broad range of Gram -ve bacteria. The sequence was used to generate the peptides (AAM05853-W06074) which were screened for bactericidal activity against E.coli strains US and 0111:B4 in a radial diffusion assay. The BPI peptides can be used to enhance the treatment of Gram -ve bacterial infections, prophylactically for patients about to undergo surgery or for disinfection or sterilisation. Administration of the BPI peptides together with an antibiotic results in synergistic or potentiating bactericidal effects greater than the effect of the individual peptide or antibiotic. Also the BPI peptides can reverse the resistance of certain Gram -ve bacteria to certain antibiotics e.g. carbenicillin, cefazolin. (Updated on 25-MAR-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  KWKAQKRFLKMSGNFDLSIEGMSISADLKLGSNPTSGKPTITCSSCSSHINSVHVHISKS 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The recombinant BPI (bacterial permeability-increasing), is designated rBPI23. BPI peptides (AAR76244-458) were screened for bactericidal effects on B. coli strains J5 and 011:184 in a radial diffusion assay. BPI peptides which retain antibacterial activity are expected to improve the therapeutic effectiveness of antibiotics when concurrently administered. Concurrent administration of BPI protein products and antibiotics is shown to reverse resistance of a variety of gram-negative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MRENWARGPCNAPRWYSLMYLVAIGTAVTAAVNPGVVVRISQKGLDYASQQGTAALQKEL 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                BPI protein and an antibiotic in a medicament - for treatment of gramnegative bacterial infection.
                                  BPI peptide; bacterial permeability-increasing peptide; bactericidal; therapeutic effectiveness; antibiotic; concurrent administration; reverse resistance; gram-negative bacteria.

                                            Compsn. comprising bactericidal permeability increasing protein prod. and bactericidal activity enhancing poloxamer surfactant - useful for treating bacterial infections, and for inhibiting bacterial and fungal growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                480
                                                                                                                                                                                                                                            The known anti-microbial properties of bactericidal/permeability increasing protein (BPI) can be enhanced by administering the BPI with a stabilising polyoxypropylene-polyoxyethylene block copolymer (poloxamer). Therapeutic compositions pref. contain one of the poloxamers 333, 334, 335 or 403 and opt. comprise EDTA. They are useful for treating bacterial and fungal infections. The present sequence is that of human recombinant BPI and was disclosed in Gray et al., J.Biol.Chem., 264:9505 (1989)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PTGLTFYPAVDVQAFAVLPNSSLASLFLIGMHTTGSMEVSAESNRLVGELKLDRLLLELK 420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           361 PTGLTFYPAVDVQAFAVLPNSSLASLFLIGMHTTGSMEVSAESNRLVGELKLDRLLLELK 420

Patent No. US20020090368A1
GENERAL INPORMATION:
APPLICANT: Little, Roger G. II
APPLICANT: Little, Roger G. II
IITLE OF INVENTION: Therapeutic Uses of Bactericidal/Permeability
Increasing (BPI) Protein Products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 CNAPRWVSLMVLVAIGTAVTAAVNPGVVVRISQKGLDYASQQGTAALQKELKRIKIPDYS

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 15, A

SEQ search request 10/629516

I need your approval for this search request.

I would like to request an expedited sequence search for this case because it is due this bi-week. Please search commercial and published patent databases.

10/629516

SEQ ID NO: 2,

SEQ ID NO: 2, amino acids 10-193

Please print out the result.

Thanks. Rita
